# • Data Visualization

Data visualization is the process of creating graphical representations of data in order to help people understand and explore the information. The goal of data visualization is to make complex data sets more accessible, intuitive, and easier to interpret. By using visual elements such as charts, graphs, and maps, data visualizations can help people quickly identify patterns, trends, and outliers in the data.
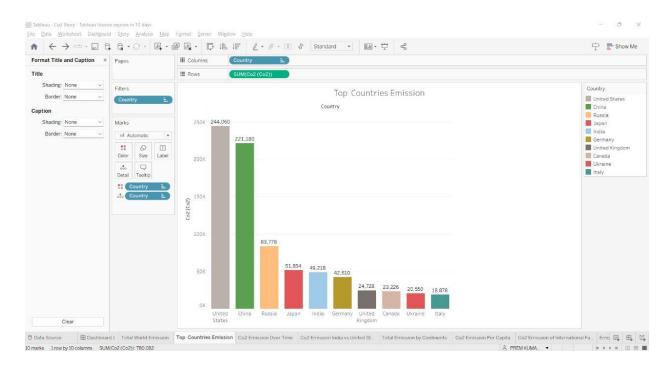

To Understand- Total World Emission, Co2 Emission Over Time, Total Emission By Continents

To understanding the data visualization is given below some pictures we were created and given link below :
